

CARBON MONOXIDE INSPECTION TIP SHEET

Annual inspection of your fuel-burning appliances is critical to help in protecting your family against carbon monoxide. Use this tip sheet to get started today.

Before the call

Find a TSSA-Registered Fuel Contractor in your community using the Find a Contractor tool at www.ccsafety.ca

During the call

Six questions to ask the contractor

Question #1

- ☐ Are their inspection staff fully trained by course?

Question #2

- ☐ Are they able to provide inspections for all of your fuel-burning appliances?

Gas fireplace

Gas water heater

Furnace

Gas stove

Gas boiler

Gas Water Heater

Question #3

- ☐ Does the inspection include the entire system?
- fuel supply
 - the venting itself
 - chimney/flue/gas system, areas around the device

Question #4

- ☐ Will they provide a written inspection report or the business requested and the results?

Question #5

- ☐ Will they be available to provide additional explanation and answer questions?

Question #6

- ☐ Will they supply an estimate? (please get one)

After the call

- We recommend you obtain more than one estimate
- Review the information you have gathered
- Select your contractor and book the inspection

After the inspection

- Review your inspection report
- Ensure, if required, you comply with any follow-up instructions or need clarification

The best way to avoid carbon monoxide exposure is to eliminate it at the source.

Use the advice included in this kit to help track the annual inspection of your fuel-burning appliances.
